Coal reservts in the country

16. SHRI PARMESHWAR KUMAR AGARWALLA: Will the Minister of COAL be pleased to state:

(a) what is the percentage of good quality coal and inferior coal reserves in the total coal reserves of the country;

(b) whether it is a fact that coal reserves beyond 300 metres are generally of good quality;

(c) if so, whether there is any long term planning to extract such reserves of coal in future;

(d) if so, the details thereof; and

(e) if not, the reasons therefor?

THE MINISTER OF STATE OF THE MINISTRY OF COAL (SHRI AJIT KUMAR PANJA): (a) As per information available from geological Survey of India (GSI), estimates in percentage terms of quality-wise coal reserves of the country as on 1.1.1994 for coal seams having thickness 0.9 metre and above, down to depth of 1200 metres, are given below:

(in percentage

Proved & Indicated Reserves			Inferred Reserves
Coking	Non-coking		
	Superior	Inferior	
14.23	11.36	52.69	21.72

(b) to (e) Quality of coal reserves does not necessarily depend on depth as different coalfields exhibit different trends. The depth of exploitation of coal reserves varies depending upon factors like thickness and gradient of coal seams, coal quality and other geomining parametres including inter-se configuration of various seams in a given deposit/block. In future with the exhaustion of shallow reserves more and more deeper reserves will be exploited.
